

Biodiversity Report

Site Address: Land rear of 19 Main Street, Little Thetford, Ely, Cambridgeshire

Reference No. 206/6B for discharge of conditions in relation to application no. 16/01570/FUI

The land beyond the new bungalow is open orchards. It is our intention for this to remain in its entirety. In addition we intend to keep this area fully open to the existing wildlife. There is also an abundance of wild birds within the orchard and some new bird nesting boxes will be added to the orchard to encourage more birds to use this area.

With all the fruit trees within the Orchard it is also an extremely good environment for insects and especially bees with all the spring flowering of the fruit trees.

We will have composting areas within the site for natural recycling of vegetation created on the site. This will also provide a safe area and benefit the hibernation of hedgehogs through the winter months.

The orchards are to remain.
